

# ANGEL LAPEL PIN

This pin is a recycle project using safety pins, but would be just as appropriate for formal wear as for sportswear.

List of supplies and tools:

- 7 gold or silver safety pins #0
- 35 2 ½ mm pearls for skirt
- 6 5 mm pearls for separation of pins on skirt
- 1 7mm pearl for bodice
- 1 8mm pearl for head
- 20 gold or silver beads for wings and halo
- beading wire 32 gauge
- Metal Pin Back
- Hot Glue and gun.
- Beading tools are optional...beads can be strung with the fingers for this project.

Start by threading 5 pearls (2 ½ mm) onto each safety pin. Use the photos as a guide as you work. Cut one piece of beading wire 6 or 7 inches long and string the head ends of the pins on this wire adding a 5mm pearl between each safety pin. Then take the wire on each side, and thread it back through to the center pin. Snug the pins up on the wire; then twist the wire at the back and clip.

Cut another piece of wire about 12 inches long and thread all 6 of the back of the safety pins onto the wire. Center them on the wire, and then add the 7mm pearl (bodice) by threading the ends of the wire through the bead from opposite sides. Next, thread 7 gold or silver beads onto each end of the wire and thread the wire back through the 7mm pearl. Pull up until the wings form. Continue with the same wire and thread both ends up through the 8mm pearl (head). Thread 6 gold or silver beads for the halo on one end of the wire; then thread them on the other wire in the opposite direction. Snug everything down until it is fairly tight with the head resting on the bodice and the halo standing on edge on the top of the head. Run the ends of the wire down through the 8mm bead, then twist them together, and clip them. Turn pin over and hot glue the pin back in position. See last picture for placement.
