

Plastic Egg Bunny Treasure

List of tools & Materials:

Plastic Egg... any size that opens around the middle
White or Pink Chenille stem
¼ inch White Pompom
2 inch squares of felt (one for the feet and one for the hat)
2 inch square of light cardboard (posterboard) for feet
Small amount of 1/8 inch ribbon
Thick white glue (Tacky..suggested) Hot Glue Gun
Black Sharpy Black Enamel Paint (Testor's..suggested)
Heated Ice Pick to make holes in plastic egg(or nail held in pliers)

Note: You must poke through the egg with hot ice pick so the glue can seep inside the egg to secure the parts to the plastic.

Carefully heat ice pick or nail and poke holes in egg... one on the large end of the egg for the feet, one in back for tail, and two on top for ears.

Cut out the enclosed Feet and Hat Patterns and trace them according to instructions. Glue felt to feet pattern with Tacky and let dry before cutting them out. Put a puddle of hot glue in middle of feet and press egg in place.

Cut two 3-inch pieces of Chenille Stem and fold in half. Open the egg, poke ends through the holes, and drizzle enough hot glue over the ends to secure them. Hold until glue cools. Grasp the sides of stem and pull out to match ears in photo. Slide hat over one ear. Glue ribbon bow in place. Hot glue tail in place.

Using the tip of a paint brush handle, dip into black paint and make eyes and nose for your bunny. Then, either use a fine line brush to paint the whiskers, or draw whiskers on with a Black Sharpy Felt Pen.
